## **DETAILED ACTION**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the means for measuring voltage a distance from the housing must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

- 2. Claim 9 is objected to, as "said electrically conductive coating" lacks proper support in the claims. Correction is required.
- 3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

Application/Control Number: 10/807,661

Art Unit: 3617

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-9,14-24 and 29-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Staerzl '472.

Staerzl teaches provision of a housing structure (hull) having an electrical conductive coating.

Re "housing structure for said marine propulsion unit", a ship inherently includes propulsion equipment, such as an engine, and the hull houses such an engine.

Re claims 5-7,19-22,32, such is accorded no weight in the claim as such is directed towards apparatus, while the claim is method.

Re claim 16, such fails to define over the other half of the ship's hull.

Re claim 8, such is inherent since the hull halves of Staerzl are insulated from each other.

6. Claims 1-3 and 9-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Staerzl '460.

Staerzl shows a marine propulsion unit housing **11**, given a positive potential (therefore inherently anode). A voltage is sensed at reference point **13**, and such sensed voltage is used to control the operation of the device.

Application/Control Number: 10/807,661 Page 4

Art Unit: 3617

Apparatus limitations are treated as above.

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

8. Claims 10-13, 25-28 and 35-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Staerzl '472 in view of Staerzl '460.

Staerzl '472 fails to mention the measuring of voltage as claimed.

It would have been obvious to one of ordinary skill in the art at the time of the invention to provide for control of the system of '472 as taught by '460, and provide for measurement of potential voltage.

Such a combination would have been desirable at the time of the invention so as to provide additional control.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Matsunaga et al. discloses the field of the invention, including a conductive coating and remote voltage measurement.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ed Swinehart whose telephone number is 571-272-6688. The examiner can normally be reached on Monday through Thursday 6:30 am to 2:00 pm.

Application/Control Number: 10/807,661
